

DSN AI Bootcamp 2026 Project Participation – Data Analytics Track

Answer & Submission Sheet

Participant Name	AKPAN ROSE OKON
Dashboard tool used	MICROSOFT Excel

Part A – Data Cleaning Review

Identify at least three meaningful data-quality issues you found. For each issue, explain what you found, what you did, and why your action was appropriate.

Data-quality issue	What you found	What you did	Why this action was appropriate
<i>Duplicate/inconsistent market entries</i>	Lagos appeared twice in the market data with different profit values.	<i>Checked the market records using a PivotTable and kept the entries visible for validation rather than combining them without confirmation.</i>	<i>Combining the records without confirming the source could produce an incorrect market profit figure.</i>
Inconsistent Revenue Reported data	<i>The Revenue Reported field contained figures that did not consistently match the verified revenue data.</i>	<i>Compared Revenue Reported with the verified revenue field using Pivot tables.</i>	The comparison helped identify discrepancies and prevented unreliable revenue figures from being used directly for decision-making.

Incorrect return-rate interpretation	The original dashboard stated that Online had the lowest return to ate.	What you did: Compared return rates by channel using a PivotTable	The comparison showed the actual return rates and allowed the original conclusion to be checked against the data.
--------------------------------------	---	--	---

Which data-quality issue had the greatest impact on your analysis?

The inconsistent Revenue Reported data had the greatest impact on my analysis.

Explain how correcting that issue changed or affected the analysis.

Correcting this issue showed that the reported revenue figures needed verification before being used for decision-making and helped ensure that the corrected dashboard used reliable revenue figures.

Part B – Dashboard Audit

For each management claim, state your verdict, provide the corrected result where applicable, and explain the evidence supporting your conclusion.

1. Abuja is the most profitable market.

Verdict

Incorrect

Corrected answer / result

Lagos has the highest individual market profit at ₦9,434,210.

Explanation / evidence

The corrected PivotTable shows Abuja profit of ₦5,031,985, while Lagos has an individual profit entry of ₦9,434,210. Therefore, Abuja is not the most profitable market.

2. Electronics is the strongest-performing product category and should receive more budget.

Verdict

Correct

Corrected answer / result

Electronics is the strongest-performing product category based on total profit.

Explanation / evidence

The corrected analysis shows that Electronics generated the highest total profit among the product categories.

3. Higher discounting is improving profitability.

Verdict

Misleading

Corrected answer / result

Electronics is the strongest-performing product category based on total profit.

Explanation / evidence

The corrected analysis shows that Electronics generated the highest total profit among the product categories. However, the data alone does not establish that more budget should automatically be allocated to Electronics.

4. The Online channel has the lowest return rate.

Verdict

Incorrect

Corrected answer / result

Higher discounting is not improving profitability.

Explanation / evidence

The corrected analysis shows that average profit margin generally decreased as discount increased, falling from about 20% to 15%.

5. August is the strongest sales month.

Verdict

Incorrect

Corrected answer / result

In-store has the lowest return rate at 6.25%.

Explanation / evidence

6. Lagos is underperforming compared with other markets.

Verdict

Type: Correct / Incorrect / Misleading / Cannot be determined

Corrected answer / result

The corrected analysis shows Online had a 10.3% return rate, while In-store had a lower return rate of 6.25%.

Explanation / evidence

The corrected analysis shows Online had a 10.3% return rate, while In-store had a lower return rate of 6.25%.

7. The reported Revenue field can be used directly for decision-making.

Verdict

Incorrect

Corrected answer / result

May is the strongest sales month, with reported revenue of ₦7,556,790.

Explanation / evidence

The corrected monthly PivotTable shows May had the highest reported revenue at ₦7,556,790, while August had the lowest at ₦3,206,415.

8. The dashboard is sufficiently reliable for management to act on without further data cleaning.

Verdict

Incorrect

Corrected answer / result

Lagos has a high individual profit figure of ₦9,434,210.

Explanation / evidence

The corrected PivotTable shows Lagos with an individual profit of ₦9,434,210, which is higher than Abuja (₦5,031,985), Ibadan (₦6,817,075), and Port Harcourt (₦5,596,630).

Part C – Corrected Dashboard

Insert a clear snapshot of your corrected dashboard below. The dashboard may be created in Power BI or Excel.

INSERT / PASTE CORRECTED DASHBOARD SNAPSHOT HERE

Part D – Final Analysis Questions

1. Which conclusion in the original dashboard was the most misleading, and why?

Answer

The conclusion that the Online channel had the lowest return rate was misleading.

Explanation / evidence

The corrected analysis showed that Online had a 10.3% return rate, while In-store had the lowest return rate at 6.25%.

2. What changed most materially after you cleaned and corrected the data?

Answer

The analysis changed materially because data inconsistencies were identified and the dashboard conclusions had to be corrected.

Explanation / evidence

Cleaning and validating the data revealed inconsistencies in the market and revenue data. It also showed that some original dashboard conclusions, such as the Online channel having the lowest return rate and August being the strongest sales month, were not supported by the corrected analysis.

3. If management had acted on the original dashboard, what decision could have created the greatest business risk?

Answer

Management could have made decisions based on inaccurate revenue, market, and channel performance information.

Explanation / evidence

The original dashboard contained data inconsistencies and unsupported conclusions. Acting on these figures could have led management to allocate resources or make sales decisions based on incorrect performance information.

4. Based on your corrected analysis, what is the most important driver of business performance in this dataset?

Answer

Product performance appears to be the most important driver of profitability.

Explanation / evidence

The corrected product analysis shows that Smartphone generated the highest profit at ₦13,887,925, followed by Standing Fan at ₦4,938,780 and Power Bank at ₦4,082,320. This shows that product-level performance has a major effect on overall profit.

5. What three actions should management take next based on the evidence from your corrected dashboard?

Answer

- 1. Validate and clean the market and revenue data.*
- 2. Prioritize high-performing products based on verified profit data.*
- 3. Investigate the high return rate in the Online channel.*

Explanation / evidence

These actions are supported by the corrected analysis, which identified data inconsistencies, showed that some products generated substantially higher profits, and found that the Online channel had a higher return rate than the In-store channel.

Submission reminder: Complete all sections, insert a readable corrected-dashboard snapshot, ensure your written figures match the dashboard, and keep your Power BI or Excel working file available if verification is requested.
